

Installing git

Kamal Paudel

Note: This is not related to Python. We are installing this software to share lecture notes, assignments, and reading materials

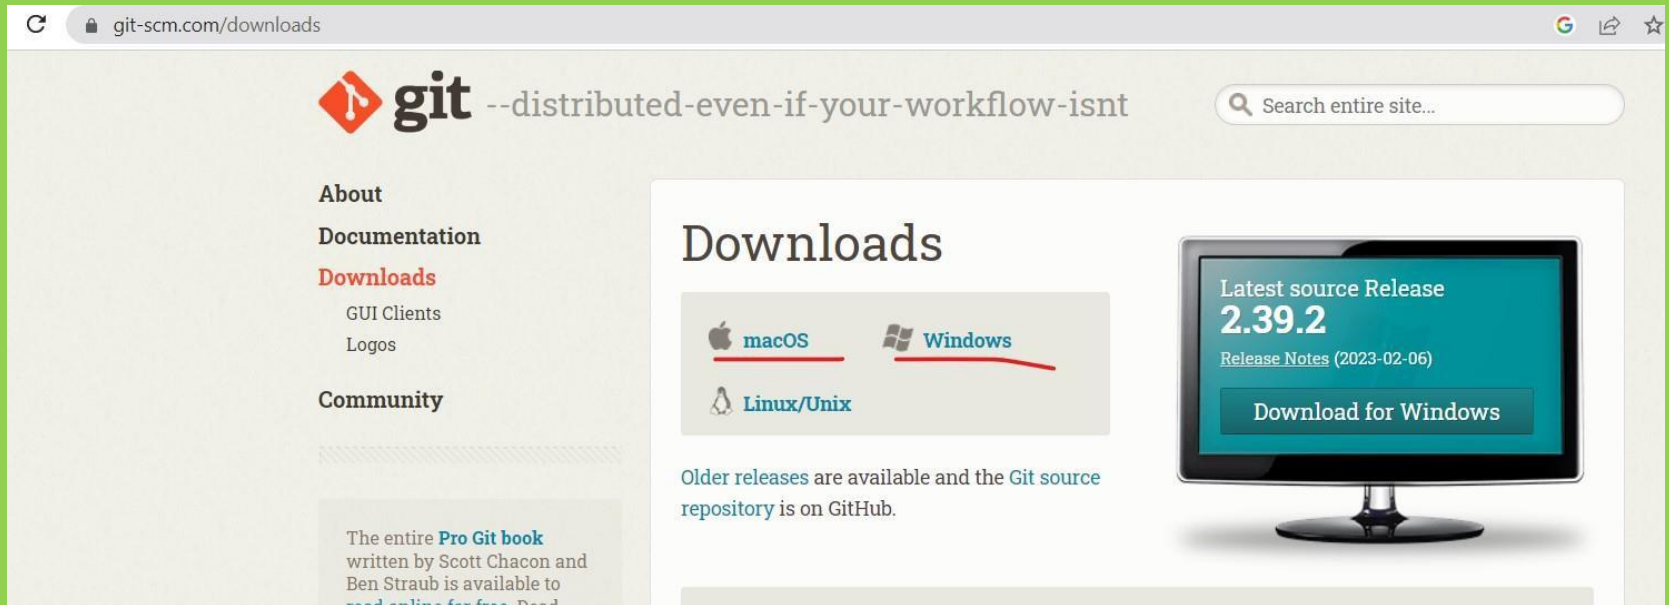

What is git?

- Git is a version control system used to track changes in code and other types of files.
- It allows multiple people to work on the same codebase simultaneously.
- Git is particularly useful for collaboration, code reviews, and keeping up-to-date.
- We are installing git only for file-sharing purposes
- We will discuss how to get our shared files in today's session

Step- 1:Download

Navigate Official sites of anaconda website : <https://git-scm.com/downloads>

Choose appropriate git based on your operating system

Step- 1:Download

 **git** --fast-version-control

Using winget tool

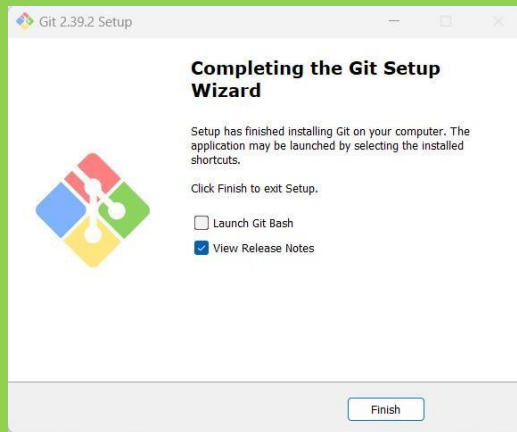

Install [winget tool](#) if you don't already have it, then type this command in command prompt or Powershell.

```
winget install --id Git.Git -e --source winget
```

Install

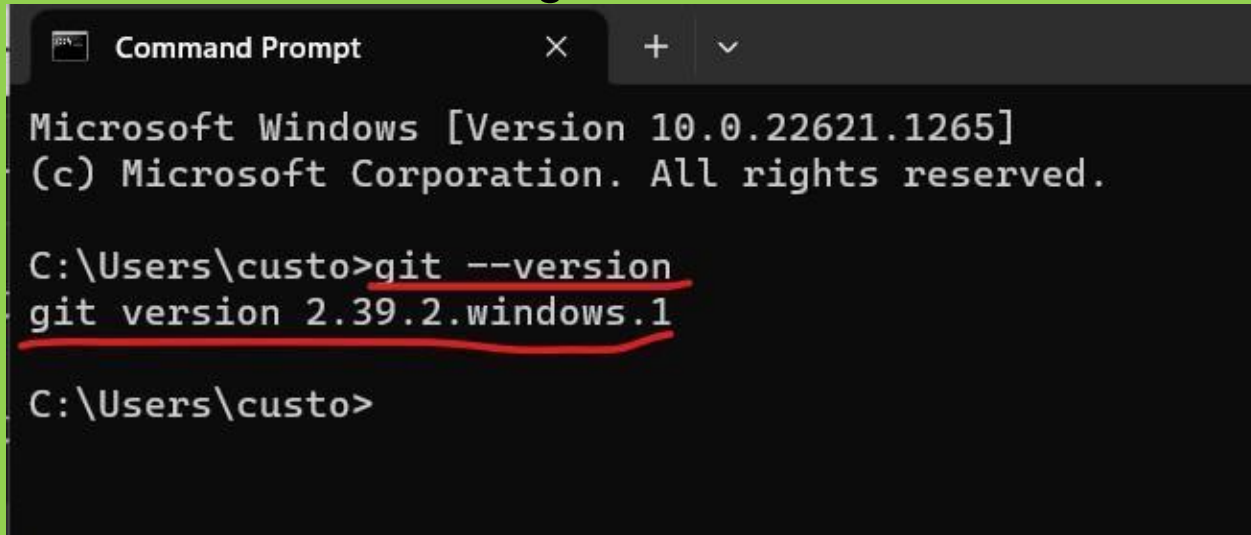

Leave all the options as default and simply click 'Next' until the installation is finished.

Verify Installation

After the installation is completed, open CMD and type 'git --version'. The output will look like the following

```
Microsoft Windows [Version 10.0.22621.1265]
(c) Microsoft Corporation. All rights reserved.

C:\Users\custo>git --version
git version 2.39.2.windows.1

C:\Users\custo>
```

Done!

We will conduct a practical exercise on how to obtain the lecture notes using Git commands in today's session.
